Welcome to the Endometriosis2017

President
Mario Malzoni - Italy

Honorary President

Dear Friends and Collegues
it is our pleasure and honour to announce the upcoming Congress **Endometriosis2017 from diagnosis to medical and surgical management: a stocktaking international experts' meeting**, that will be held in Naples (Italy) from September 14th to September 16th, 2017.
We are all aware that nowadays endometriosis is probably the most challenging among gynecological benign diseases, in terms of epidemiologic spread and impact on women's quality of life. The management of these patients is still characterized by several critical points.
This congress will be a great opportunity to present and discuss the latest developments related to endometriosis disease. Our field is constantly advancing and sometimes is challenging to follow.
Our aim is to provide a comprehensive update on the overall management of this disease, from diagnosis to clinical and surgical treatment, with special attention to the reproductive outcome.
With this aim, we have made every effort to involve in our International Faculty the top experts in this area, in order to offer the participants a great opportunity of scientific and professional advancement.

We are convinced that the best management of patient affected by endometriosis may arise from the creation of a specialized net of referral centers for diagnosis and treatment and at this aim a complete knowledge of the disease is crucial for any clinician facing it in his daily practice, in order to make the best possible use of advancing science to improve the care of patients.
We built the scientific program in order to offer lectures on the main topics and live surgery and ultrasound sessions with interactive debates to show their practical application, so that at the end of the course the participants are expected to have detailed comprehension of the anatomical knowledge and surgical skills needed to correctly perform endoscopic surgery of endometriosis, ultrasound exam requirements to perform an accurate mapping of the lesions, information about other imaging techniques appropriate for presurgical evaluation of patients, correct principles of medical treatment and management of infertile patients with endometriosis.
The advancement of knowledge about endometriosis disease and the diffusion of good clinical practice in patients'care is our final goal, and your contribution is the key to this purpose.

So that, come and join the **Endometriosis2017 from diagnosis to medical and surgical management: a stocktaking international experts' meeting** and help us to shape the future of this challenge.

Sincerely,
Mario MALZONI
